Compositions comprising polypeptides and polymucleotides for stimulating the immune system and for treating malignancies associated with overexpression of the HER-2 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to compositions for stimulating the immune system and for treating malignancies associated with overexpression of the HER-2 protein. The compositions comprise immunogenic groups of the HER-2 proteins. The present sequence, is one such peptide used in the compositions of the present invention. The compositions can be used for treating cancer, e.g. breast, ovarian, lung, prostate and colon cancers
                                                                                                                                                                                                                                                                                                                                                                                                  Cytostatic, immune response, HER-2, human, epitope, cancer, breast; ovarian, lung, prostate, colon.

New peptidyl aldehydes are provided which are of general formula Z-P4-P3-P2-P1-CHO, in which P1-CHO is reduced Leu, val or Ile, P2 is Phe or Ala, P3 is Pro or hydroxy-Pro, P3 is G1y, and Z is benzyloxy-carbonyl, benzoylglycine, tert-butoxycarbonyl or acetyl. The compounds are inhibitors of the BrAAP component of the multicatalytic proteinase complex (MPC). They are thus useful for inhibiting undealred intracellular proteolysis and mitosis in excessively proliferating cells, such as in cachexia, and inhibiting unwanted immune response, such as in autoimmune diseases and transplant rejection. The present sequence
                                                                                                                                                                                                                                                                                                               /note= "Leu-CHO; i.e. the terminal COOM group is replaced by an aldenyde group"
                                                                                                                                multicatalytic proteinase complex, intracellular proteolysis, mitosis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a synthetic immunogen for inducing specific antibodies against gonadotropin releasing hormone (GnRH also known as luteinising hormone releasing hormone, LHRH) comprising a fusion peptide which comprises a promiscuous helper T-cell peptide epitope and immunomimic peptide epitope or its analogue. The synthetic immunogen is useful inducing an immune response against GnRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other gynascological cancer), prostate cancer. The immunogen is effective in eliciting high and specific anti-GnRH antibody titres. The present sequence is a synthetic spacer peptide used in the immunogen of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel synthetic immunogen for inducing immune response against gonadotropin releasing hormone, comprises fusion peptide having promiscuous helper T-cell peptide epitope and immunomimic peptide epitope or its analog.
                                                                                                                                                                                                                                                                                            Gonadotrophin releasing hormone; GnRH; synthetic immunogen;

Synthetic peptides beginning with the sequence Gly-Pro-Arg will bind to fibrinogen and prevent fibrin polymerisation. A scrambling reaction was used to determine whether unique GPR-like peptides could be created from a reaction seeded with GPR and if these new products could bind to fibrinogen. The peptide GPRL was one of the new peptides to be generated by hydrolysis/synthesis of fibrinogen/GPR. It inhibits fibrin polymerisation but its affinity was less than that of GPR or GPRP. (Updated on 25-MAR-2003 to correct PN field.)
                    platelet aggregation, fibrinogen A-alpha chain, protein scrambling,
GPR-like peptide.
                                                                                                                                                                                                                                                      Identifying peptide(s) which bond to predetermined targets - by degradation and recombination of peptide(s) and isolating bound

The inventors claim a method for inexpensively and rapidly producing a large and varied population of peptides and screening this varied population for the presence of peptides which bind to a target, for example, a macromolecule associated with a particular physiological function. The specific binding peptides are isolated and sequenced, synthesised on a large-scale, their biological activity is demonstrated, and then subjected to clinical testing. The random population of peptides is generated by employing a scrambling system which utilises one or more proteases, esp. papain, pepsin, bromelin, thermolysin, promase, ownertypsin, subtilism and dispeptidyl peptidase IV. A typical starting protein is casein. Targets are esp. receptors involved in physiological processes, partic. fibrinogen, sickle cell hasmoglobin; collagenase IV; cennin, Gp. IID IIIa or phospholipase A2. It has been demonstrated that synthetic peptides beginning with the sequence GPR will bind to fibrinogen were screened on CE. Three of these GPR peaks were bound to fibrinogen were screened on CE. Three of these GPR peaks were collected and sequenced and found to be GPRL, GPRF and LPK. In addition, a GPR-independent peak was also collected and to have the sequence IV. Briefle.)

DKDDNF. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

New peptidyl aldehydes are provided which are of general formula Z-P4-P3-P2-P1-CHO, in which P1-CHO is reduced Leu, val or Ile, P2 is Phe or Ala, P3 is Pro or hydroxy-Pro, P3 is Gly, and Z is benzyloxy-carbonyl, benzyylgytychne, tert-buckycarbonyl or acetyl. The compounds are inhibitors of the BrAAP component of the multicatalytic proteinase complex (MPC). They are thus useful for inhibiting undesired intracellular proteolysis and mitosis in excessively proliferating cells, such as in cachexia, and inhibiting unwanted immune response, such as in autoimmune diseases and transplant rejection. The present sequence represents one of three preferred peptides fitting the above general
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              region; cyclic peptide; antimicrobial; disinfectant; therapy; ervative; amphipathic anti-parallel beta-sheet region; plant disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence represents a loop region used in a peptide of the invention. The peptides are cyclic peptides (I), which have: (a) an amphipathic anti-parallel beta-sheet region (SR), a loop region (LR) and a beta-turn region (TR); (b) a net positive charge at physiological ph; and (c) at least one basic amino acid (aa) in LR or TR. (I) are broad spectrum antimicrobials, specifically for use against E. coli, pseudomonas aeruginosa, methicillin-resistant Staphylococcus aureus (MRSA), vancomycin-resistant Enterococcus faecium and penicillin-resistant Streptococcus pneumoniae. More generally they are active against Gram-positive or -negative bacteria, fungi, yeast and protozoa.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New cyclic peptide(s) with antimicrobial activity - contain amphipathic beta-sheet, loop and beta-turn regions, have better activity, bio:availability and protease resistance than linear analogues.
New peptidyl aldehyde cpds. - are inhibitors of the BrAAP component of the multi:catalytic proteinase complex.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score 15; DB 2; Length 4;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Chang C,
                                                                                                                                                                                                                                                                                                                                                                                                   formula
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a fusion protein, which comprises essentially of an immunoglobulin molecule (Ig e.g. IgG1 Fc or IgG2 FC) or its fragment and a man anon-immunoglobulin molecule. The non-immunoglobulin molecule. The non-immunoglobulin molecule. The non-immunoglobulin molecule is a protein having the biological activity of glucocerebrosidase (GCR-like protein having the biological activity of glucocerebrosidase (GCR-like comprising: (a) a signal/ladedr sequence encoding the fusion protein comprising: (a) a signal/ladedr sequence (b) an Ig molecule, or (c) a carget protein sequence having the biological activity of GCR. Also included are an expression vector comprising the fusion protein and comprising the corposition comprising the novel fusion protein and comprising the ovector, producing the novel fusion protein, and at least one parameteutical cariter, diluent or excipient. The fusion protein is cuseful for treating glycolipid storage disease. The fusion protein is also useful for the manufacture of a pharmaceutical composition for treating cuseful for the manufacture of a pharmaceutical composition for treating these diseases. The present sequence represents a linker peptide suitable control in a fusion protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

The present invention describes cyclic peptides (I): (i) comprising an amphibilic anti-parallel beta-sheet region (A), a loop region (B) and a beta-turn (C): (ii) having net positive charge at physiological pH; and (iii) including at least one basic amino acid (aa) in (B) or (C).

AAY09554 to AAY09683 and AAY17301 to AAY17385 represent specifically claimed cyclic peptides and peptide segments. (I) are broad-spectrum antimicrobials (biostatic or biocidal), effective against bacteria, yeast (e.g. Candida species), fungi and protozoa. Particularly they are used to control Escherichia coli, Pseudomonas aeruginosa, vancomycin-resistant control in animals or plants, also as preservatives and prevent infections, in animals or plants, also as preservatives and distinfectants for medical equipment, foods, cosmetics, optionally as mixtures or in combination with other antimicrobials. Compared with linear analogues, (I) are more effective with better bioavailability and/or serum half-life (better resistance to proteolysis, allowing lower
                                                                                                                                                                                                                                                                       ö
Apart from clinical uses, (I) are also used as disinfectants and preservatives for medical equipment, foods, cosmetics etc., also for treatment of plant diseases. Compared with non-cyclised analogues (i.e. tachyplesin and protegrin type peptides), (I) and are more effective, with better bloavailability and/or serum half-life (increased resistance to proteolysis). They are more suitable for oral administration, can be used at lower doses and are unlikely to induce development of resistant
                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cyclic peptide; antimicrobial; amphiphilic beta-sheet; biostatic; biocidal; bacteria; yeast; Candida species; fungi; protozoa; Escherichia coli; Pseudomonas aeruginosa; infection; preservative; vancomycin-resistant Enterococous faecium; disinfectant; food; methicillin-resistant Staphylococcus aureus; medical equipment; penicillin-resistant Streptococcus pneumoniae; cosmetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Antimicrobial cyclic peptides with amphiphilic beta-sheet region.

A method has been developed for enhancing bone formation, treating pathological dental conditions, and treating degenerative joint conditions by administration a compound that inhibits the activity of NF-KB or that inhibits proteasomal activity or that inhibits production of proteasome proteans. The method can be used for enhancing bone formation, treating pathological dental conditions, degenerative bone conditions, osteoporosis, bone fracture or deficiency, primary or secondary hyperparathyroidism, periodontal disease or defect, metastatic bone disease, osteolytic bone disease, post-plastic surgary, post-prosthetic joint surgery, and post-dental implantation, and for stimulating hair growth. The compounds may also be useful in wound healing or tissue repair. The present sequence represents a proteasome inhibitor peptide
                                                                                                                           ö
doses and making them more suitable for oral delivery). Since (I) are structurally related to naturally occurring antimicrobial peptides, they are less likely to induce development of resistant strains
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Compound that inhibits the activity of NF-kappa B useful for enhancing

The present invention relates to a new method of stimulating hair growth in mammals by administering a compound that inhibits either activity of NF-kappaB, proteosomal activity or production of NF-kappaB or proteosomal proteins. The compounds of the invention are used to treat alopecia in also be used to sincase hair growth in other animals. The invention can also be used to stimulate growth of bone e.g. for treating degenerative bone diseases, fractures and dental problems. The present amino acid
                                                                                                                                 Hair growth; NF-kappaB; proteosomal; alopecia; human; mammal; hair growth; animal; bone growth; degenerative bone disease; fracture; dental problem; proteasome inhibitor; necrosis factor; ALLM.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               for treating alopecia, by NF-kappaB or proteosomal enzymes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1; Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ARB30515-17 represent exemplary compounds of the invention which inhibit proteasomal activity or the transcription factor NF-kB. The specification describes a method for identifying a compound which is effective in treating myeloma bone disease. The method comprises subjecting the compound to an assay to determine its ability to inhibit NF-kB activity or production. The compounds reduce myeloma tumour volume, delay onset of limb paralysis, decrease the viability of myeloma cells and reduce the volume of tumour marker, 1bG2b. The compounds are useful for treating multiple myeloma such as osteopenia, osteolytic lesions, osteopetrosis, bone fracture and osteolytic bone disease, and myeloma bone disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Identifying a compound effective in treating multiple myeloma and myeloma bone disease, involves subjecting the compound to an assay determining its ability to inhibit NP-kB or proteasomal activity.

This invention relates to a novel method for enhancing bone formation, treating a pathological dental condition or treating degenerative joint conditions in a vertebrate animal. The method involves administration of a compound that inhibits the activity of a nuclear transcription factor beta (NP-kbeta), inhibits proteasomal activity or inhibits production of proteasomes. The invention may be used to treat pathological dental conditions, to treat degenerative joint conditions in a vertebrate animal such as osteoporosis, bone fracture or deficiency, primary or secondary hyperparathyroidism, periodontal diseases or defect, metastatic bone disease, post-plastic surgery, post-prosthy disease, osteolytic bone disease, post-plastic surgery, post-prosthetic joint surgery and post-dental implantation; and for stimulating hair growth in a mammallan subject. The discorders of hair growth include male pattern baldness, alopecia arecta, alopecia induced by cancer chemotherapy and hair thinning associated with ageing. The bone defects include elevation of peak bone mass in pre-menopausal, gluccorticoid induced osteoporosis and disease osteoporosis, arthritis, repair of cartilage defects or disorders, and in wound healing and tissue repair. The administration of the compounds leads to increased bone growth and cartulation and estimulation of hair follicles. The compound does not the present services in which the isopremoid parkers. the isoprenoid pathway. The present sequence represents an NF-or proteasome inhibitor which may be used in the method of the nhibit

The invention discloses peptides comprising deltaV1-1, deltaV1-2, pseudodelta receptors for activated C-kinase (RACK), deltaV1-5 or their deltaratives or fragments. Protein kinase C (PKC) is a key enzyme in carriardives or fragments. Protein kinase C (PKC) is a key enzyme in cinal transduction involved in a variety of cellular functions including cell growth, regulation of gene expression and ion channel activity. The collisation of different PKC isozymes to different areas of the cell in carrials molecules (RACKS). Peptides that mimic either the PKC-binding site on RACKs or the RACK-binding site on PKC are isozyme specific archoring molecules (RACKS). Peptides that mimic either the PKC-binding site on RACKs or the RACK-binding site on FKC are isozyme specific archivating or inhibiting translocation or function of deltaPKC. The crivating or inhibiting translocation or function of deltaPKC. The crivating or inhibiting translocation or function of deltaPKC. The crivating against damage to cells or tissues due to ischaemic or hypoxic event caused by stroke. Acute administration of the peptides, conjugated to a carrier peptide or a Tat-derived peptide, protected hearts against data indicate that in an intact heart, inhibition of deltaPKC conferred craeser than 50% protection against ischaemic damage. The peptides in ABG31159-ABG31219 are the deltaY1-1, deltaY1-2, pseudo-delta RACK, deltaY1-5 (or their derivatives or tragments) agonists or antagonists to the rat delta protein kinase C (PKC) Rat; delta protein kinase C; deltaPKC; VI domain; vasotropic; cerebroprotective; deltaVI-1; deltaVI-2; RACK; pseudo-delta RACK; pseudo-delta receptor for activated C-kinase; deltaVI-5; PKC; protein kinase C; eignal transduction; cell growth; gene expression; ion channel activity; translocation; hypoxia; stroke; ischaemic damage; creatine kinase; antagonist; agonist; mutant; mutein. New delta protein kinase C peptide for reducing or enhancing damage to cells or tissues exposed to ischemic or hypoxic event caused by stroke, or for protecting tissue from damage due to ischemia. Rat delta PXC first variable region, delta V1-1, modified peptide, #26 /note= "Wild-type Gly substituted by Pro" (STRD ) UNIV LELAND STANFORD JUNIOR. The invention relates to a method for identification and determination of target-specific folding sites in peptides and proteins. The invention also relates to a method for determining a secondary structure binding to constructing and complexing peptides that bind to targets, by constructing and complexing peptides that bind to targets, by constructing and screening the metallopeptides. The method is useful for determining secondary structure binding to desired target within parent polypeptide with primary structure that binds to the target, where the target of interest is a receptor, antibody, toxin, enzyme, hormone, nucleic acid, intracellular protein domain of biological relevance or extracellular protein domain of biological relevance or amyloid beta-protein related peptides is useful for the treatment of alzheimer's disease (AD). A library of peptides targetting vasopressin, oxytocin or angiotensin receptor is useful for treating prion's disease. The present sequence is a metallopeptide N-terminal peptide used for the contraction of disease treatment. This peptide is used to illustrate the method of
                                                                                                                                                                                               Metallopeptide, nootropic; amyloid beta-protein; Alzheimer's disease; AD; Prion's disease; oxytocin; angiotensin; vasopressin; neuroprotective;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Determining secondary structure binding to desired targets within parent polypeptides that bind to targets, by constructing and complexing peptides to metal ions to form metallopeptides and screening the metallopeptides
                                                                                                                                                             Metallopeptide N-terminal peptide #8 used for Prion disease treatment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Example 3; Page 142; 165pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 4, Sequence 4, Sequence 4, Sequence 10, Sequence 10, Sequence 10, Sequence 10, Sequence 10, Sequence 16, Sequence

-!- MISCELLANEOUS: The C-terminal region is probably used for anchoring the protein to the cell membrane. The repeat sequences would be the surface antigen of the organism.
-!- SIMILARITY: Contains 1 TSP type-1 domain.
-!- SIMILARITY: Contains 1 TSP type-1 domain.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           vertebrate host).
-!- MISCELLANBOUS: The C-terminal region is probably used for anchoring the protein to the cell membrane. The repeat sequences would be the surface antigen of the organism.
-!- SIMILARITY: Contains 1 TSP type-1 domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           æ

-!- MISCELLANBOUS: The C-terminal region is probably used for anchoring the protein to the cell membrane. The repeat sequences would be the surface antigen of the organism.
-!- SIMILARITY: Contains 1 TSP type-1 domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       -13.

-!- FUNCTION: The circumsporozoite protein is the immunodominant
- surface antigen on the sporozoite (the infective stage of the
malaria parasite that is transmitted from the mosquito to the
vertebrate host).
                                                                                                                                                                                                                                                      SEQUENCE FROM N.A.

Mol. Mar. Biol. Biotechnol. 1:420-425(1992).

1-FUCCION: Stimulates the secretion of gonadotropins.

1-SUBCELLIAR LOCATION: Secreted.

1-SUBILARITY: Belongs to the GnRH family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     gonadal cycle.",
Gen. Comp. Endocrinol. 112:394-405(1998).
-! FUNCTION: Stimulates the secretion of gonadotropins.
-!- SUBCELLUAR LOCATION: Secreted.
-!- SUBLIARITY: Belongs to the GnRH family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     FB4E47EB868C2FBD CRC64;

Biotechnol. 20:1118-1123 (2002).

-!- FUNCTION: Required for the synthesis of the hydromethylpyrimidine (HMP) moiety of thiamine (4-amino-2-methyl-5-hydroxymethylpyrimidine) (By similarity).

-!- PATHWAY: Thiamine biosynthesis.
-!- SIMILARITY: Belongs to the thic family.
                                                                                                                                      Shewanella oneidensis.

Stevens VC;

```
The invention relates to a synthetic immunogen for inducing specific antibodies against gonadorropin releasing hormone (GnRH also known as luteinishing hormone releasing hormone, LHRH) comprising a fusion peptide which comprises a promiscuous helper T-cell peptide epitope and immunomimic peptide epitope or its analogue. The synthetic immunogen is useful inducing an immune response against GnRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer), endometriosis, uterine fibroids, benign prostatic hypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GnRH antibody titres. The present sequence is a synthetic immunogen of the invention
                                                                                                 Novel synthetic immunogen for inducing immune response against gonadotropin releasing hormone, comprises fusion peptide having promiscuous helper I-cell peptide epitope and immunomimic peptide epitope or its analog
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gonadotrophin releasing hormone; GnRH; synthetic immunogen;

The synthetic immunogen is useful inducing an immune response againet GnRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer), endometriosis, uterine fibroids, benign prostatic hypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GnRH antibody titres. The present sequence is a synthetic
                                                                                                                                                                                                                                                                            Novel synthetic immunogen for inducing immune response against gonadotropin releasing hormone, comprises fusion peptide having promiscuous helper T-cell peptide epitope and immunomimic peptide epitope
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gonadotrophin releasing hormone, GnRH, synthetic immunogen, luteinising hormone releasing hormone; LHRH, contraceptive, promiscuous helper T-cell peptide epitope, immunomimic peptide epitope, breast cancer, uterine cancer; gynaecological cancer; endometriosis, uterine fibroid, benign prostatic hypertrophy; prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (1. .10

                                                                                                                                                                                                                                                                                                                                        The invention relates to a synthetic immunogen for inducing specific antibodies against gonadorropin releasing hormone (GnZH also known as luteinsing hormone releasing hormone, LHRH) comprising a fusion peptide which comprises a promiscuous helper T-cell peptide epitope and immunomimic peptide epitope or its analogue. The synthetic immunogen is useful inducing an immune response against GnZH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer), endometriosis, uterine fibroids, benign prostatic hypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GnZH antibody titres. The present sequence is a synthetic
                                                                                                                                                                                                                                                            Novel synthetic immunogen for inducing immune response against gonadotropin releasing hormone, comprises fusion peptide having promiscuous helper T-cell peptide epitope and immunomimic peptide epitope
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gonadotrophin releasing hormone; GnRH; synthetic immunogen;

The invention relates to a synthetic immunogen for inducing specific antibodies against gonadorropin releasing hormone (GnRH also known as lutelinising hormone releasing hormone, LHRH) comprising a fusion peptide which comprises a promisecuous Relper T-cell peptide epitope and immunogen is useful inducing an immune response againer GnRH in an animal subject, and as such is useful inducing an contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer), endometriosis, uterine fibroids, benign prostate hypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GnRH antibody titres. The present sequence is a synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel synthetic immunogen for inducing immune response against gonadotropin releasing hormone, comprises fusion peptide having promiscuous helper T-cell peptide epitope and immunomimic peptide epitope
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gonadotrophin releasing hormone; GnRH; synthetic immunogen;
luteinising hormone releasing hormone; LHRH; contraceptive;
promiscuous helper T-cell peptide epitope; immunomimic peptide epitope;

```
The invention relates to a synthetic immunogen for inducing specific antibodies against gonadotropin releasing hormone (GnRH also known as luteinishing hormone releasing hormone, LHRH) comprising a fusion peptide which comprises a promiscuous helper T-cell peptide epitope and immunominic peptide epitope or its analogue. The synthetic immunogen is useful inducing an immune response against GnRH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer), endometriciasis, uterine fibroids, benign prostatic hypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GnRH antibody titres. The present sequence is a synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel synthetic immunogen for inducing immune response against gonadotropin releasing hormone, comprises fusion peptide having promiscuous helper T-cell peptide epitope and immunomimic peptide epitope

Novel synthetic immunogen for inducing immune response against gonadotropin releasing hormone, comprises fusion peptide having promiscucus helper T-cell peptide epitope and immunomimic peptide epitope
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a synthetic immunogen for inducing specific antibodies against gonadotropin releasing hormone (GRPH also known as luteinising hormone releasing hormone, LHRH) comprising a fusion peptide which comprises a promiscuous helper T-cell peptide epitope and immunosen is useful inducing an immune response against GRPH in an animal subject, and as such is useful as a contraceptive and in the treatment of diseases such as cancer (of the breast, uterus and other gynaecological cancer), endometricals, uterine fibroids, banign prostatic hypertrophy and prostate cancer. The immunogen is effective in eliciting high and specific anti-GRPH antibody titres. The present sequence is a synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Length 50;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Score 138.5; DB 5;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Synthetic immunogenic peptides are provided in which a universal immune stimulator is linked to a peptide or protein hapten containing B cell and/or cytocoxic T lymphocyte epitopes, giving a product which causes potent immune responses to the coupled peptide or protein. The stimulator consists of (A) a promiscuous halper T cell epitope (Th) which elicits an immune response to the coupled peptide in members of a heterogeneous population expressing diverse HLA phenotypes, and (B) an adjuvant peptide sequence from the invasin protein of Yershina. Spacer anino acid sequence (e.g. Gly-Gly) can be provided between the invasin and Th domains and between the immune stimulator and hapten components. When the hapten is LHRH, then optionally the invasin demain can be omitted from the immune stimulator component. The present sequence represents an LHRH-containing, invasin-free immunogenic peptide as above which can be used as a potent vaccine for treating e.g. prostatic hyperplasia, androgendependent carcinoma, prostatic carcinoma, testicular carcinoma, endometriosis, benign uterine tumours, recurrent functional ovarian cysts, (severe) premenstrual syndrome or oestrogen-dependent breast cancinoma, cancer, or for induction of infertility. (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                               8
                                                                                           셤
al., Nucleic Acids Research, 8: 5845 (1980)]. The DNA encoding the 1st 81 AAs of the N-terminal of NSI (NSI 81) is linked via a synthetic sequence to DNA encoding Region I cofteg | Hanking regionless the 18 AA signal region, which in turn is fused to DNA encoding Region II-contg flanking region less the first nine N-terminal AAs. This CS fusion is designated Rifedelta9. The Pro residue separating the Asp (at the C-terminal of the linker) from Rifedelta9 is an artifact of a filled in BamHI site. The peptide can be used in a vaccine for protection against malaria. See also AAR12306-R12311 and AAR13176-R13179. (Updated on 25-WAR field)
                                                                                                                                                                      ï
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The product is useful in preparation of vaccines for treatment and prophylaxis of plasmodium sporozite infection. It may be easily produced in large pure quantities from a transformed B.coli expression system. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New polypeptide used in malaria vaccine - comprises immunogenic determinants from 1st and 2nd flanking regions of plasmodium surface protein and intermediate repeat domain.

falciparum circumsporozoite (CS) protein (Dame et al., Science 225 : 593

(1984)], and the influenza virus non-structural protein 1 (NS1), [Baez et al., Nucleic Acids Research, 8 : 5845 (1980)] The DNA encoding the 1st al. AAs of the N-terminal of NS1 (NS1 81) is linked via a synthetic sequence to DNA encoding Region I contg. flanking regionless the 18 AA signal region, which in turn is fused to DNA encoding Region II-contg. flanking regionless the 18 AA signal region. This CS fusion is designated Rifauth. The Pro residue separating the AAP (at the C-terminal of the linker) from Rifauth is an arti-fact of a filled in BamHI site; the Gly separating Region I and arti-fact of a filled in BamHI site; the Gly separating Region I and arti-fact of a synthetic Pokl/Tthill I linker. The peptide can be used in a vaccine for protection against malaria. The complete nucleotide and AA sequences are given in EP 30470, filled May 1, 1990. See also AAR12306-R12311 and AAR13175-R13179. (Updated on 25-MAR-2003 to correct PA field.) (Updated on 24-OCT-2003 to standardise OS field)

The polypeptide is prepd. by genetic engineering of genes encoding the P. falciparum circumsporozoite (CS) protein [Dame et al., Science 225 : 593 (1984]), and the influenza virus non-structural protein 1 (NB1), [Baez et al., Nucleic Acids Research, 8 : 5845 (1980)]. The DNA encoding the 1st al., Nucleic Acids Research, 8 : 5845 (1980)]. The DNA encoding the 1st sequence to DNA encoding Region I contg. flanking region less the 18 AA signal region. This is linked to a synthetic sequence encoding two repeat units from the immunodominant region, which in turn is fused to DNA encoding Region II-contg. flanking region is a linker; from the Region I-contg. CS Asp (at the C-terminal of the linker; from the Region I-contg. CS apparating the repeat units and the Region II-contg. CS flanking region is an artifact of a filled-in BamHI site; the Gly separating the repeat units and the Region II-contg. CS flanking region is an artifact of a filled-in BamHI site; the Gly separating the repeat units and the Region II-contg. CS flanking region is an artifact of a synthetic RokI/TthIII I linker. The peptide can be used in a vaccine for protection against malaria. See also AAR12306-R12311 and AAR13175-R13179. (Updated on 25-MRA-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Immunogenic determinant; circumsporozoite; CS; vaccine; malaria; hybrid;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAR13178
```

```
The polypeptide is prepd, by genetic engineering of genes encoding the P. falciparum circumsporozoite (CS) protein [Dame et al., Science 225 : 593 (1984]), and the influenza virus non-structural protein 1 [NR1], [Baez et al., Nucleic Acids Research, 8 : 5845 (1980)]. The DNA encoding the 1st al. AM of the N-terminal of NS1 (NS1 81) is linked to a synthetic sequence encoding four repeat units [the variant form) from the immodeminant region, which in turn is linked via a synthetic sequence to DNA encoding Region I contq. flanking region. This is linked to DNA encoding Region II-contq. flanking region. The Pro residue separating the Asp (at the C-terminal of the linker) from the Region I-contq. CS flanking region I and II-contq. CS flanking region is an artifact of a synthetic SOKI/THIII linker. The peptide regions is an artifact of a synthetic SOKI/THIII linker. The peptide can be used in a vaccine for protection against malaria. See also AR12306-RA2311 and AR12175-RU3175. (Updated on 25-MAR-2003 to correct PA field.) (Updated on 24-OCT-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Region
                                                                                                                                                                                                                                           Region
    The polypeptide is prepd. by genetic engineering of genes encoding the P. falciparum circumsporzoite (CS) protein [Dame et al., Science 225: 593 (1984], and the influenza virus non-structural protein 1 (NS1), [Baez et al., Mucleic Acids Research, 8: 545 (1980)]. The DNA encoding the 1st sequence encoding four repeat units [SN181] is linked to a synthetic sequence encoding four repeat units From the immunodominant region, which in turn is linked via a synthetic sequence to DNA encoding Region I contay. flanking region less the 18 AA signal region. This is linked to base the 25 and signal region. The pro residue separating the ASP (at the C-terminal of the linker) from the Region I contay. Gallanking region is an artifact of a filled-in BamHi site, the contay can protein and II-contay. CS flanking regions is an artifact of a synthetic Fokl/TthIII I linker. The peptide can be used in a vaccine for protection against malaria. See also AAR12306-R12311 and a vaccine for protection against malaria. See also AAR12106-R12311 and con 24-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ij
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Polypeptide comprising immunogenic determinants from P falciparum - for vaccine against malaria infection in humans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to a method for identifying candidate protestins in pathogens useful as anti-infectives. The invention discloses a computational method which involves the calculation of several sequence attributes and their subsequence analysis results in the identification of outlier proteins in different pathogens. The method is useful for the identification of outlier proteins (e.g. virulence proteins, antigens or proteins used as drug targets) in pathogenic organisms. The method of the invention provides reproducible results as it does not despend on the variable biochemical characterisation of proteins. ABO23500-ABO23517 represent outlier proteins identified from different pathogenic organisms
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Identifying candidate proteins useful as anti-infectives involves matching outlier protein sequences with protein sequences in databases.

Sequence of the CS gene (AANB1108) is from lambda-mPfl. A recombinant DNA molecule is claimed, comprising functional DNA coding sequence fused, in phase, to a portion of the Pre-S2 region of a hepatitis B virus (HBV) Pre-S2. Sprotein coding sequence. The functional DNA coding sequence comprises the Pre-S2 coding sequence, Pre-S1 coding sequence or entire Prasmodium, or a HIV coding sequence such as an HIV envelope gene sequence, e.g. HIV C7 protein coding region, HIV Peptide 121 coding region, or HIV Dreesman peptide coding region. (Updated on 25-MAR-2003 to correct PA field.)

## ALIGNMENTS

```
TYPE: PRT
ORGANISM: Artificial Sequence
FEATURE:
OTHER INFORMATION: Chimeric peptide consisting of amino acid sequence 1-10 of humar
OTHER INFORMATION: GARH linked by a spacer to amino acid sequence 378-398 of Plasmc
OTHER INFORMATION: ium falciparum circumsporozoite (CSP) protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DOCATION: (11)...(16)

OTHER INFORMATION: Spacer peptide

NAME SEPTIDE

NAME SEPTIDE

NAME SEPTIDE

OTHER INFORMATION: Amino acid sequence 378-398 of the Plasmodium falciparum

OTHER INFORMATION: dircumsporozoite (CSP) protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            LOCATION: (1)...(10)
OTHER INFORMATION: Amino acid sequence 1-10 of the human GnRH hormone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NAME/KEY: MOD RES
LOCATION: (1) (1)
OTHER INFORMATION: Pyroglutamic acid or 5-oxoproline
NAME/KEY: MOD RES
LOCATION: (51) (51)
OTHER INFORMATION: Amidated glycine or glycinamide
         Sequence 20, Application US/09848834A
Patent No. US20020076416A1
GENERAL INFORMATION
TITLE OF INVENTION: Chimeric Peptide Immunogens
TITLE OF INVENTION: Chimeric Peptide Immunogens
FILE REFERENCE: 1102865-0047
CURRENT PELING DATE: 2001-05-04
PRIOR APPLICATION NUMBER: 05/09/848,834A
PRIOR APPLICATION NUMBER: 60/20,328
NUMBER OF SEQ ID NOS: 20
NUMBER OF SEQ ID NOS: 20
SOFTWARE: Patentin version 3.0
SEQ ID NO 20
INDEGRIF: 51
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              NAME/KEY: PEPTIDE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NAME/KEY: PEPTIDE
US-09-848-834A-20
```

```
TYPE: PRT
ORGANISM: Artificial Sequence
FEAVINES.
ORGANISM: Artificial Sequence
FEAVINES.
OTHER INFORMATION: Chimeric peptide consisting of amino acid sequence 378-398 of th
OTHER INFORMATION: Plasmodium falciparum CSP protein linked by a spacer to amino ac
OTHER INFORMATION: id sequence 2-10 of the GRRH hormone
NAME/KEY: MOD_RES
                                                                                                                                                                                                                                                         OTHER INFORMATION: Chimeric peptide consisting of amino acid sequence 1-10 of human OTHER INFORMATION: GARH linked by a spacer to amino acid sequence 830-844 of Tetanu OTHER INFORMATION: GARH linked by a spacer to amino acid oTHER INFORMATION: toxold precursor (Tentcoxylysin) linked by a spacer to amino acid NAME/KEY: MOD_RES

TITLE OF INVENTION: A COMPUTATIONAL METHOD FOR THE IDENTIFICATION OF CANDIDATE PROTE
TITLE OF INVENTION: USEFUL AS ANTI-INFECTIVES
FILE REFERENCE: Q63915
CURRENT APPLICATION NUMBER: US/09/820, 843A
CURRENT FILING DATE: 2001-03-30
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    .
